Presents a showing of the video

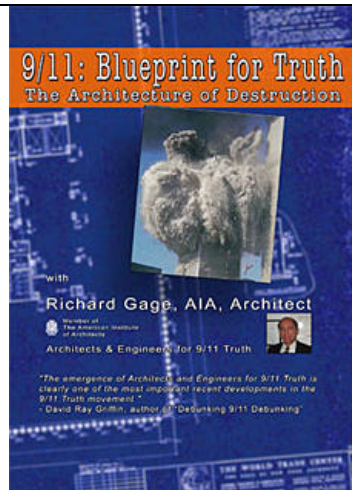

9/11 Blueprint for Truth: The Architecture of Destruction

A recorded multi-media lecture by **Richard Gage, AIA**

Monday, October 22, 7:30 PM

Quaker Meeting House

144 South Quaker Lane, West Hartford

Why are Architects and Engineers Re-examining the WTC Collapses?

Richard Gage, American Institute of Architects

The six years since 9/11/2001 has given us the time and space to emerge from the hypnotic trance of the shocks of these attacks and to rationally evaluate the existing and new evidence that has become available.

Architects and Engineers are trained to design buildings that function well and withstand potentially destructive forces. However, the 3 high-rise buildings at the World Trade Center which "collapsed" on 9/11 (the Twin Towers plus WTC Building #7) presented us with a body of evidence that was clearly outside the scope of our training and experience.

There is however a growing body of very solid evidence regarding these "collapses" that has emerged in the last couple of years - gaining ground even in the mainstream media. This new evidence casts grave doubt upon the theories of the 9/11 building collapse "experts" as well as the official reports by the 9/11 Commission, FEMA, and NIST.

It lays out a solid convincing case which architects & engineers will readily see: that the 3 WTC high-rise buildings were destroyed by both classic and novel forms of controlled demolition. You will find the evidence for you to draw your own conclusions in *9/11 Blueprint for Truth: The Architecture of Destruction*. We hope you will find the courage and take the necessary time to review each section thoroughly.
